

Replication Summary Template

Sharma et al. 2024 - Explainable artificial intelligence for intrusion detection in IoT networks

Status: template only. No experimental values are reported in this document.

Scope

This report records a planned or completed replication. It does not claim results until the configured code has been run on documented NSL-KDD and UNSW-NB15 files.

Source and Protocol

Paper DOI: 10.1016/j.eswa.2023.121861

Full-paper table/page consulted: _____

Dataset versions and acquisition dates: _____

Task definition and labels: _____

Encoding, scaling, feature selection, correlation threshold, and selected feature count:

Experiment Record

Transcribe paper-specific values before comparing an experiment to the source paper.

Model	Datasets	Paper settings	Replication settings	Status
DNN	Both	Not transcribed	Not run	Pending
1D-CNN	Both	Not transcribed	Not run	Pending
2D-CNN	Both	Not transcribed	Not run	Pending

Both refers to NSL-KDD and UNSW-NB15; create one row per completed model-dataset run in the result ledger.

Results

No replication measurements have been generated. After execution, carry metrics from results folders into the comparison ledger and retain run metadata, figures, and environment details.

Explainability and Deviations

Explainability protocol, target model, background sample, and interpretation: _____

Record every departure from the paper, software versions, hardware, random seed, split, runtime, and unresolved ambiguity here.
